NOTICE

Permission to Operate Granted

GARY FITZPATRICK
1003 S COUNTY ROAD 1115,
MIDLAND, TX - 79706-4924.

The Interconnection Agreement for your Distributed Generation (DG) Project was approved on 02/27/2025, and you may operate the system at your discretion. Please contact Oncor with any changes in the equipment or other terms of the Interconnection Agreement.

What's next?... Over your next full billing cycle, within 30-60 days, Oncor will reprogram your meter so it will record surplus generation that is delivered to the Oncor grid, and update your account profile to let the market know you have solar.

Is it working?... You can verify that Oncor has completed the meter reprogramming by looking at the display on your meter. The meter automatically cycles through several different channels. Once the meter has been reprogrammed, the surplus generation channel, labelled "057", will be one of the channels displayed. You can also visit SmartMeterTexas.com to view your consumption and surplus generation readings. Please note, the column labelled Generation is actually Surplus Generation. Beginning with your **next full billing cycle**, after the Oncor meter has been reprogrammed, Oncor will begin reporting any surplus generation to your Retail Electric Provider.

What about credits?... Customers are NOT required to participate in a solar buy-back program with a Retail Electric Provider. Customers should evaluate plan options and choose a plan that's right for them. To learn more, visit PowertoChoose.org to review and evaluate all published Retail Electric Provider plans.

Respectfully,
Oncor Electric Delivery
